

BEST 2011

Company Name: Damascus Fortune

Damascus Fortune is an innovation driven eco-responsive company, carrying a patent pending

Technology which produces low cost industry grade carbon nanotubes and nanofibers by converting

certain carbon emissions from certain industries. DF has its offices and operations at Gandhidham, Gujarat; Navi Mumbai, Maharashtra & Singapore.

Damascus Fortune has patented technology that transforms harmful carbon emissions into carbon nanotubes - one of the strongest material known to man. Our equipment is installed on factory chimneys in order to capture the waste carbon gas and convert it into usable carbon nanomaterials. The technology has made carbon sequestering profitable and sets a new precedent for reducing carbonemissions.

The patented technology will change the dynamics of climate change globally as it creates a mad rush for emissions to convert them into useful products.

Damascus Fortune is the first Indian nanotech company to be in Forbes 30 under 30. Damascus Fortune has also been covered in MIT Technology Review. The process has been verified by National Research Development Corp. of the Govt. of India
